SUMMARY OF EVENTS FOR THE THIRD QUARTER:

A permit amendment application, titled “*PE:7008 Monitoring Program Reduction Request*” was submitted to the Ministry of Environmental and Climate Change Strategy (ENV) on October 17th, 2019 from Quinsam Coal. An amendment to the monitoring requirements of effluent permit 7008 was received on November 1st, 2019. The following amendments to authorization 7008, Section 4 are approved:

Section 4.1 Effluent and In-Mine Sites: the following monitoring sites are removed from the monitoring program:

E292126 (south dyke sump) – this monitoring site captures seepage that is pumped underground into 2-north mine pool and does not discharge directly to the receiving environment.

E292128 (1977 bulk sample pit) – data show results here have been stable over time; also, the water from this site is captured at other monitoring sites (4S-Lo, SPC and LLE).

E292129 (culvert downstream of 4 south access road) – data show results here have been stable over time; also, the water from this site is captured at LLE.

E225796 – Block 242 decant and E225797 – Block 242 underground settling pond effluent
The above two monitoring sites are in an area that has been reclaimed, and they no longer represent effluent from the Block 242 area. The most effective way to monitor for any impacts here is in the groundwater, which will continue to be sampled.

Section 4.1 Effluent and In-Mine Sites: the following monitoring sites have reduction in the frequency of pH and conductivity monitoring amended from weekly to monthly reduce.

E207412 - north pit sump water, (WP),
E283433 -2-north portal sump effluent (2NPS)
E217015 - 3-south pit main sump water (3S)
E292127- 2-south pit water (2S)
E207411 - culvert at Middle Quinsam Lake Road (WC)
E217014 - downstream discharge from settling pond 1 (SPC)

Section 4.1 Effluent and In-Mine Sites: the following monitoring sites have reduction in the frequency of the bi-weekly TSS monitoring requirement is removed from sites:

E207411- WC
E217014- SPC

For the site E292069 -7-south surface decant (7SSD) - The monitoring frequency at this location is reduced from monthly to quarterly when no discharge is occurring.

Reduction in daily composite total suspended solid sampling at sites both permitted locations Settling Pond 1 and 4. E207409- Settling pond 4 discharge (WD) and E218582 Settling pond 4 discharge (SPD). This has been changed to weekly samples based on flows greater than 0.054 m³/s. An additional analysis of dissolved metals was also included in the monthly frequency to strengthen the data set.

Compliance with Effluent Permit 7008:

Most environmental monitoring obligations as per the Effluent Permit 7008 (PE-7008) were completed this quarter. Permit non-compliances (PNC) were experienced with flow meters not operating correctly at Settling Pond #1 (SPD) and 2-South outflow. The discharge information was collected from SPD meter and but is currently being reviewed and verified. This will be submitted once completed. The flow meter at SPD was replaced on December 9th, 2019 with a new flow meter. This data meter was downloaded recently, and it was discovered that it does not include a maximum flow rate. The permit requires both maximum and average continuous flow rates. This a permit non-compliance from December 9th to present. A new flow meter is on order.

At the 2-South pit continuous discharge is required. The flow meter installed at this location was recording continuous flow, but the meter would not connect to the laptop. There was a series of software issues and finally once connected the meter erased all stored data and performed a factory reset. This occurred on January 28th, 2019. All data from July to present was lost. The meter has a display that provides a water level reading in the H-Flume. This has been recorded daily since July, the data was converted to flow based on the H-Flume weir calculation. The water level / flow rate at this location is fairly consistent when there is limited precipitation on site.

There was one permit limit exceedance that occurred at SPD related to dissolved iron above the permit limit of 0.5 mg/L resulting in 0.517 mg/L on December 4th, 2019. Provincial Emergency Program (PEP) was informed with a spill report number generated (DGI-193640).

Discharge from Settling #1 and Settling Pond #4 was collected for 96-Hr LC- 50 (100% Survival) Rainbow Trout bioassays. Each sample passed with 100 % survival rates. Toxicity sampling at 7SSD and 7S did not occur this quarter due to there being zero discharge from 7SSD.

During the 3rd quarter (Fall 2019), the receiving environment monitoring program for both lakes and river/stream stations was completed. There was one sample that was not collected on the Iron River at IR6. This occurred due to a mix up in the monitoring locations where IR8 was collected instead of IR6.

The “*fall flush*” receiving environment monitoring program followed the 5 samples in 30 days sampling period, spanning from October 15th through November 20th. From October 1st through November 20th the mine received 185.50 mm of precipitation. The fall 5 in 30 sampling regime captures the complete fall turnover in the lakes and observes river water quality when flows are highest (fall flush).

The Long Lake Seep Passive Treatment system has been functioning since August 2018. The discharge from the treatment system is directed into the inlet of 2-South pit that flows into the 3-South Pit and then is pumped to Settling Pond #1. Taking this route, with treatment system

discharge eliminates the last two treatment ponds (aeration lagoon and last settling pond) and keeps the effluent within the authorized works.

The treatment system was receiving 4.5 L/s throughout the quarter. The 2-South pit maintained a 2 m water cover over the PAG-CCR with intermittent discharge to 3-South pit. This system works well at providing adequate water cover for both 2-South and 3-South pits.

The Long Lake Seep started flowing on November 25th, 2019 with flow directed through the H-Flume and discharge captured by the flow meter at Long Lake Seep Middle (LLSM).

1. SETTLING PONDS

1.1 WATER QUANTITY

The decant riser was blocked by a beaver dam until November 12th, 2019 at Settling Pond 1. The flow meter was replaced on December 9th, 2019. Flow is being verified before submitted.

At Settling Pond 4 discharged 887191m³ of water at an average flow rate of 0.112m³/s this quarter. The maximum flow rate observed was measured as 0.17m³/s. samples.

7SSD did not discharge this quarter all water quality samples were collected from the ponded water with no discharge occurring.

1.2 WATER QUALITY

All other measured water quality parameters were below the required permit limits for all three settling ponds.

As mentioned previously the treatment system discharge was directed to the 2-South pit and overflows into the 3-South pit where the water is pumped to Settling Pond #1. Weekly sulphate concentrations ranged from 61mg/L to 390 mg/L and averaged 234 mg/L. Weekly sulphate did decrease with increased flow rates and discharge from the settling pond trend. Concentrations of most parameters displayed a slight reduction contributed from the amount of precipitation received throughout the quarter. Dissolved iron expressed an increase from October compared to December sampling event (0.157 mg/L to 0.517 mg/L) resulting in a permit limit exceedance of 0.017 mg/L.

The 2-North pool receives water from the 7-South and 5-South mine combined as well as discharge from the tailings dam and previously injection of the 7 South fine tailings. The 5-South Mine pump was started on November 26th, 2019. In order to maintain the water level underground and maintain the mines underground infrastructure, dewatering wells were installed. The 2-North mine pool

water is discharged into Brinco Brook and flows into Settling Pond #4 and then into a series of wetlands before entering Middle Quinsam Lake, near the inlet.

At Settling Pond #4, weekly sulphate concentrations ranged from 180 mg/L to 510 mg/L averaging 384 mg/L. Highest concentrations were observed in December. All permitted parameters remained below permit limits.

Parameters of interest such as arsenic, aluminum, copper, lead, manganese, selenium, sulphate and zinc are closely monitored at these sites to ensure compliance with permit limits and downstream water quality guidelines.

2. RECEIVING ENVIRONMENTS

2.1 LAKES

Lake sampling commenced on October 4th following the 5 in 30 program schedule, which included Long Lake (LLM) and Middle Quinsam Lake (MQL). Appendix I, Table 3 summarizes the parameters above provincial water quality guidelines for receiving environments during fall. Appendix I, Table 34 displays the depth profiling and field results with Tables 35 through 43 displaying the water quality results compared to guidelines.

Noteworthy observations resulting from the lake monitoring program include:

- The water quality at most lakes remained below guideline levels during the fall sampling event; exceedances occurred at LLM 1mb
- LLM 1mb average dissolved sulphate (138 mg/L) was elevated above the WQG average of 128 mg/L using background hardness of 30 mg/L.
- LLM depths 1 m through 9 m average sulphate concentrations of ranged from 34 mg/L to 109 mg/L, respectively
- Concentrations of Mn-T were elevated above Max and Ave (WQG) in LLM at 1mb resulting in an average of 1.030 mg/L and maximum of 1.24 mg/L
- Elevated Mn-T are directly related to low dissolved oxygen levels at depth (below 2 mg/L).
- MQL average sulphate concentrations resulted in 33 mg/L at 1m and 4m, 29 mg/L at 9m and 36 mg/L at 1mb during fall sampling
- There were no parameters exceeding guidelines in MQL.

2.2 STREAMS AND RIVERS

The 5 samples in 30 days receiving environment program at river and stream sites took place on October 15th through November 18th, 2019. Appendix I, Tables 43 through 50 display water quality results of this program compared to water quality guidelines for the Middle Quinsam Lake Sub-basin and Iron River stations.

Monitoring stations captured within the Middle Quinsam Lake sub-basin include:

- Middle Quinsam Lake Inlet (WA),
- Middle Quinsam Lake Outlet (WB),
- No Name Lake Outlet (NNO),
- Long Lake Outlet (LLO),
- 7-South Quinsam River (7SQR),
- Quinsam River downstream of the confluence with Iron River (IRQR).

Monitoring stations on the Iron River include:

- Iron River Upstream of future 7-South Area 5 development (IR6), and
- Iron River above the confluence with Quinsam River (IR8).

Noteworthy observations resulting from the Middle Quinsam Lake sub-basin river/stream and Iron River monitoring program include:

- Extensive clear-cut logging has occurred throughout the Iron River watershed impacting the tributaries contributing to the Iron River in the IR6 and 242 area.
- The water quality at all Quinsam river sites remained below guideline levels during the fall sampling events
- In the Quinsam river upstream of the mine site average sulphate concentrations were 1.30 mg/L and at Middle Quinsam Lake outlet, 36 mg/L and downstream of 7-South mine (7SQR) resulting 32 mg/L
- Dissolved aluminum was elevated in the Iron river at site IR6 and IR8

While monitoring location LLE is considered a receiving environment station (for water quality evaluation purposes) it is important to note that this location represents the uppermost extent of an initial dilution zone for the South water management system discharge into Long Lake.

Noteworthy observations resulting from monitoring at LLE include:

- SO₄-D concentrations remain elevated for 2 out of 10 rolling averages at LLE.
- Dissolved iron was elevated above max – WQG of 0.35 mg/L during all monthly sampling events. A beaver dam was blocking the culvert until November 12th, 2019.

The Long Lake Seeps (LLS and LLSM) are not considered receiving environment sites but are compared to the Water Quality Guidelines for observation purposes only. There are two seeps that

form this site, the smaller seep, LLS has a constant flow of 150 ml/min and the larger seep, LLSM has significant flow. LLSM will cease to flow when the water elevation in the mine pool drops below the elevation of the fracture (s) forming the seepage. In order to accurately quantify the flow rates at LLSM an H-Flume coupled with an ultra-sonic depth sensor and flow meter is installed.

Noteworthy observations resulting from monitoring carried out at the Long Lake Seeps include:

- Both total and dissolved iron were observed to be elevated above max – WQG's during November and December sampling events at LLS resulting.
- the larger seep (LLSM) did not have any maximum WQG exceedances
- Sulphate ranged from (280 mg/L to 490 mg/L) from both seeps this quarter

A summary of receiving environment guideline observations for these stations is provided in Appendix I, Table 3.

3. GROUNDWATER

This quarter, 10 ex-situ groundwater wells, and 13 in-situ wells were monitored. Table 3 below, provides details on the well and sump designations and locations. Ex-situ groundwater wells are compared to the *Contaminated Sites Regulations for Protection of Aquatic Life (CSW-AW)*. Exceedances are displayed in Appendix I, Table 52. Arsenic, hydrogen sulphide as H₂S and chloride are those parameters that repeatedly exceed the CSW-AW. These parameters are naturally elevated within the groundwater due to the regional geology of the area. Quinsam monitors trends for arsenic, sulphate and H₂S in ex-situ wells and compares them to models used and source terms developed for certain areas. This is discussed in detail in the annual report due to the frequency of monitoring for groundwater wells and expected travel time of groundwater movement.

TABLE 3: LIST OF GROUNDWATER WELLS & UNDERGROUND SUMPS MONITORED IN QUARTER 3

Area	Ex-situ	In-situ
7- South	QU0813 (A & B) & QU0810	QU1410 & 1Mains7-South (Sump) 7SPS
5-South	QU1109 S	5SMW, QU1109 M
River Barrier Pillar	QU1109 S & QU1105 (D & S)	QU1109 M
2-North	QU0821 (GS & GD) & QU1010 (S & D)	5Mains #2, 1Mains 2-North & QU10-13 D
2-3 South		MW002, MW004 & QU1111
242-Area		242MW

4. ETRC MEETING

The annual ETRC agency meeting was held on November 7th with the stakeholder meeting held on November 22nd, 2019. The objective of the meeting was to review the Quinsam Coal Corporation's 2018/2019 Annual Water Quality Monitoring Report, provide updates on mine status and environmental matters, identify issues and agree on possible recommendations to be made to the Director of Environmental Protection, where warranted. The general consensus with respect to the Annual report content and results was found to be of good quality.

5. CONCLUSION

Quinsam Coal is dedicated to reducing the environmental impacts as a result of mining on the environment. Overall, the results of the monitoring data indicate that the water quality at the site and in the receiving environment remains in good condition. All parameters measured at the Settling Ponds remained below their respective permit limits with minimal parameters observed in the receiving environment, to be outside the British Columbia Provincial Water Quality Guidelines for Protection of Aquatic Life. This exemplifies that the environmental management practices employed by Quinsam Coal are effective in reducing environmental impacts to the surrounding environment. In closing, we trust the information presented in this report satisfies the conditions under Effluent Permit PE-7008. Please contact the Quinsam Coal Environmental Department at the undersigned if you have any questions or comments.

Best Regards,

Kathleen Russell BSc.

Table 2
Q3 Report 2019

SUMMARY OF PERMIT LIMIT EXCEEDANCES & PERMIT NON-COMPLIANCES							
EMS ID & Site Name	Permit Limit Exceedance (P) or Non-Compliance (PNC)	Parameter Exceeded / Other	Result (mg/L)	Requirement	Date	Non-Compliance Reason	Number of events or period for PNC, P or spill event.
E218582-Settling Pond #1 (SPD)	PNC	Maximum Continuous Flow	No results	Continuous	Dec. 9 through present	Flow meter failed. New flow meter was installed Dec 9th and it does not record maximum flow. QCC were not aware of this until the data from the new flow meter was downloaded Jan 30. A new flow meter is on order.	23 days
	P	Fe-D	0.517	0.5	Dec. 4, 2019	Possibly from beaver dam blocking decant since spring and most of fall. Water levels in pond increased, beaver dam was removed causing a flushing and suction around decant structure possibly releasing iron into water column.	1 occurrence
E292127 - 2 South Pit Outflow	PNC	Continuous Flow	Continuous daily spot measurement of water level was converted to a flow rate based on wier flow calculation.	Continuous	July 1st though present	Could not conect with flow meter. Display on screen provided a level from sensor. This was recorded daily. Continous software and computer issues. Flow meter software issues. Finally connected to the meter and discovered it was not recording flow rate. A new flow meter will be installed in February.	Q2 and Q3
E297231- Iron River Site 6 (IR6)	PNC	Missing all parameters for 1 sample set	No Results	5 weeks of sampling	Fall 5 in 30 sampling	The IR8 site was collected instead of the IR6 site.	1 out of 5 weekly samples

Table 3
Q3 Report 2019

SUMMARY OF WATER QUALITY GUIDELINE OBSERVATIONS AT RECEIVING MONITORING LOCATIONS						
EMS ID & Site Name	Parameter (mg/L, pH units)	Guideline Limit	Result	Date	Guideline	Sampling Events Exceeding Guideline
E206619 - Long Lake 1MB (LLMB)	SO4	128.00	138.00	Fall 5 in 30	A	Average of fall 5 in 30 result
	Mn-T	0.70	1.03		A	Average of fall 5 in 30 result
		0.80	0.993, 1.08, 1.24, and 1.07		M	4/5 results in fall
E297231 - Iron River (IR6)	Al-D	0.05	0.056		A	Average of fall 5 in 30 result
E297232 - Iron River (IR8)			0.058		A	Average of fall 5 in 30 result
		0.01	0.108		M	1/5 results in fall
E292130- Long Lake Entrance for South Mine Water (LLE)	FE-D	0.35	0.588, 0.411 and 0.513	Oct. 1, Nov.6 and Dec. 4	M	3/3 monthly samples
	SO4	128	142 and 146	Rolling average in fall	A	2/10 rolling averages
E292131- Long Lake Seep (smaller seep, (LLS))	Fe-T	1	1.31	Dec. 4	M	1/2 monthly samples
	FE-D	0.35	0.76	Dec.4	M	1/2 monthly samples
For all Middle Quinsam Lake Sub-basin and Iron River results background hardness of 30 mg/L was used to calculate those parameters that are hardness dependent. *SO4 at LLE was calculated using a rolling average.

29-Oct-19	<4.0		
30-Oct-19	4.0		
31-Oct-19	1.1		

Notes: From October 1-31st a TSS composite sample was required: monthly - no decant flow, weekly when max daily flow < 0.054m³/s & daily when max daily flow > 0.054m³/s

Values highlighted in **bold red** indicate a permit limit exceedance

PNC (Permit Non-Compliance) indicates a required TSS sample was not collected

A permit amendment occurred on November 1st, 2019 reducing daily composite TSS to weekly samples based on flows > 0.054m³/s

31-Oct-19	<4.0		

Notes: TSS composite sample is required: monthly - no decant flow, weekly when max daily flow < 0.046m³/s & daily when max daily flow > 0.046m³/s

Values highlighted in **bold red** indicate a permit limit exceedance

PNC (Permit Non-Compliance) indicates a required TSS sample was not collected.

A permit amendment occurred on November 1st, 2019 reducing daily composite TSS to weekly samples based on flows > 0.046m³/s

Table 26
Q3 Report 2019

Total Suspended Solid Results	
EMS ID	E292069
Site Description	7 South Surface Decant (7SSD)
TSS Permit Limit: 25.0 mg/L	
Date	TSS mg/L
01-Apr-2019	<16
06-May-2019	<4.0
01-Jun-2019	DRY
15-Jul-2019	5.2
12-Aug-2019	6.4
09-Sep-2019	14.4
01-Oct-2019	4.8
Values highlighted in bold red indicate a permit limit exceedance PNC (Permit Non-Compliance) indicates a required TSS sample was not collected.

<u>Diaphanosoma brachyurum</u>	adult				
<u>Holopedium gibberum</u>	adult				
<u>Polyphemus pediculus</u>	adult				
Phylum : Rotifera					
<u>Asplanchna sp.</u>					
<u>Kellicottia longispina</u>					
<u>Keratella cochlearis</u>					
<u>Keratella quadrata</u>					
<u>Polyarthra sp.</u>					
UID					
Benthic					
Group : Hydracarina	larvae				
TOTAL					
UID = unidentified due to lack of size and/or missing morphological characters.
